

## Using the Loft Recorder

# iPigeon Setting up the Loft Recorder

Power up the iPigeon and select the **Communication** icon

In the next screen at **Connector** change **Disable** to **Channel 1**  
*If you have 2 clocks select **Channel 2** for the second clock*

Then select the **Save** button followed by the **Device Reset** button

**The iPigeon will now close down and power up again**

and note the **RF** icon at the top will have changed from brown

to grey

**Now power down the iPigeon and remove the power cable**

**Without powering up anything**

Firstly connect the Loft Recorder to the first landing pad

Using either end of the Mini-DIN cable connect to either of the Loft Recorder Ports

Then connect other end of the Mini-DIN cable to to the iPigeon

**Now connect power lead to the Loft Recorder (not the iPigeon)**

**After powering up notice the RF icon is now back to brown**

Loft Recorder Led lights: Power on: ● Loft Pad connected: ● ETS ring over Loft Pad: ●

Everything is ready to record arrivals in the Loft Recorder when the clock is removed to go to the club (*remember to take the Mini-DIN cable to the club if marking is on another make Ring Marker*)

**Upon your return from the club, just connect the iPigeon and any returned birds will be uploaded from the Loft Recorder into the iPigeon**

***If you do not intend using the Loft Recorder on any subsequent races remember to set Channel numbers back to Disable***
